Quick
action

INDICATIONS:

Moztak 1 GR controls larvae of disease carrying mosquitoes.

RECOMMENDATIONS:

The product has been evaluated in the Philippines and the following are the recommendations:

Surface water body	Moztak 1 GR Rate/50 cm of Water depth		
Clean standing water, shallow Mosquito larval breeding areas - ponds, swamps, drainage, ditches, canals and other breeding areas	5 - 10kg / ha		
	Dosage I	Dosage II	Remarks
Stagnant rain water	1 gm/10L of water to be treated	10kg/hectare of water body to be treated	Increase the dosage by 20% in case water has high organic contents
Lagoon water	1 gm/10L of water to be treated	10kg/hectare of water body to be treated	Increase the dosage by 20% in case water has high organic contents.

DIRECTIONS FOR USE:

For most effective control, apply when mosquito larvae are in the early larval stage. Reapply when larval population build-up is observed.

METHOD OF APPLICATION AND EQUIPMENT FOR USE:

Apply granules by means of the dispenser cap, compressed air applicator, backpack granule distributor or gloved hand. Distribute granules evenly over water surface. Use low rate in areas of low organic matter.
